

Interim report for the Nineveh Trust regarding the St John's Upper Holloway Nature garden and allotment – July 2021

We launched the project with all children being invited to create a design for their nature garden. Their ideas were inspiring with lots of research undertaken and ideas for planting that would attract a range of native wildlife. We then took some of their best ideas to create our final garden design.

The pond required a lot of effort and time ..

..but it was worth it. We have thousands of tadpoles and all sorts of insects are making their home in our new pond

We have also been busy filling our garden with plants that will attract bees and other insects. We even had a local beekeeper come to visit to talk about making a bee friendly garden.

What next?

Next we plan to start making a range of mini beast homes and habitats to attract a variety of wildlife. We'd love hedgehogs and field mice to come and make a home in our garden.

We will also focus on creating our allotment and planting lots of fruit and vegetables ready to eat next year.

We will send more pictures once the garden and allotment are fully established.

Thank you for the funding that has enabled all of this to happen.

Mr Welsh and all the pupils at St John's Upper Holloway Primary School.
